

Beacon — Knowledge & Decision-Support Layer

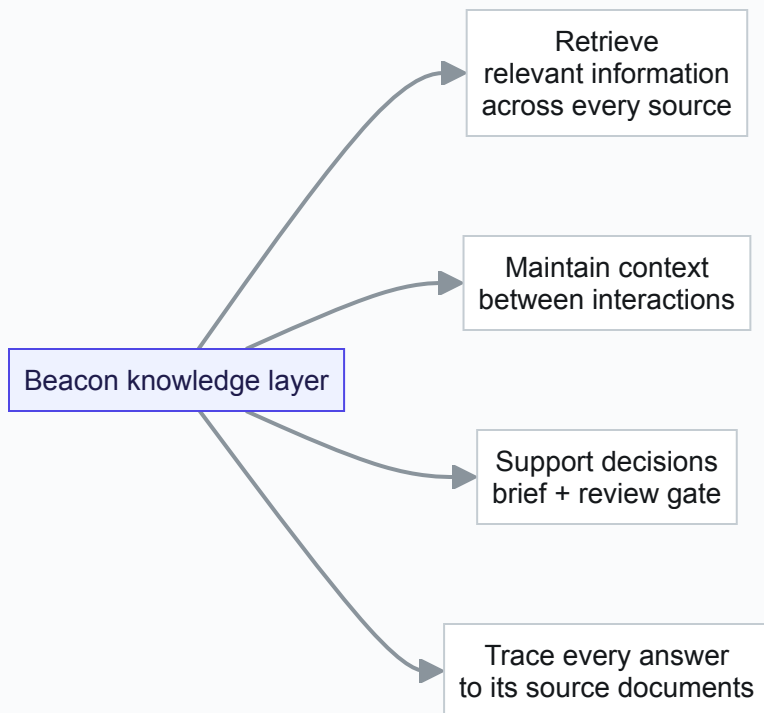

SYSTEM OVERVIEW

Federated retrieval across internal sources · grounded answers with full traceability · decision briefs with a human-review gate

THE ARCHITECTURE

WHAT THE LAYER DOES FOR TEAMS

Federated, not siloed — one query searches every connected source; each source is a swappable connector

Grounded & traceable — every answer carries the document ids it rests on; nothing is asserted without a source

Reliable by design — the extractive fallback means a provider outage degrades answer quality, never breaks the platform

Decisions get a gate — when evidence is thin, the brief flags that a person should review before the business acts

Beacon — AI knowledge & decision-support layer for consulting Waseem Iftikhar — AI / Backend operations Engineer
