

Beacon — Query Flow SEQUENCE

One decision question, end to end — federated retrieval, grounded synthesis, and a review-gated decision brief

"SHOULD WE START A NEW ENGAGEMENT BEFORE APRIL?"

A PLAIN QUESTION — SAME PIPELINE, NO DECISION BRIEF

One pipeline, two shapes — plain questions get a direct grounded answer; decision questions get a structured brief

Confidence drives the gate — thin or partial evidence raises a human-review flag rather than asserting false certainty

Always traceable — the response always carries the exact documents it used, so any claim can be checked at source
